Week : (02/02/26 to 07/02/26 )	1	<p>Given an array <b>arr[]</b> of positive integers, where each value represents the number of chocolates in a packet. Each packet can have a variable number of chocolates. There are <b>m</b> students, the task is to distribute chocolate packets among <b>m</b> students such that -</p> <ol style="list-style-type: none"> <li>Each student gets <b>exactly</b> one packet.</li> <li>The difference between maximum number of chocolates given to a student and minimum number of chocolates given to a student is minimum and return that minimum possible difference.</li> </ol> <p><b>Examples:</b>  <b>Input:</b> arr = [3, 4, 1, 9, 56, 7, 9, 12], m = 5  <b>Output:</b> 6  <b>Explanation:</b> The minimum difference between maximum chocolates and minimum chocolates is <math>9 - 3 = 6</math> by choosing following m packets :[3, 4, 9, 7, 9].  <b>Input:</b> arr = [7, 3, 2, 4, 9, 12, 56], m = 3  <b>Output:</b> 2  <b>Explanation:</b> The minimum difference between maximum chocolates and minimum chocolates is <math>4 - 2 = 2</math> by choosing following m packets :[3, 2, 4].  <b>Input:</b> arr = [3, 4, 1, 9, 56], m = 5  <b>Output:</b> 55  <b>Explanation:</b> With 5 packets for 5 students, each student will receive one packet, so the difference is <math>56 - 1 = 55</math>.</p> <p>Link: <a href="https://www.geeksforgeeks.org/problems/chocolate-distribution-problem3825/1">https://www.geeksforgeeks.org/problems/chocolate-distribution-problem3825/1</a></p>	In Class
	1	<p>Given a number <b>x</b> and an array of integers <b>arr</b>, find the smallest subarray with sum greater than the given value. If such a subarray do not exist return 0 in that case.</p> <p><b>Examples:</b>  <b>Input:</b> x = 51, arr[] = [1, 4, 45, 6, 0, 19]  <b>Output:</b> 3  <b>Explanation:</b> Minimum length subarray is [4, 45, 6]  <b>Input:</b> x = 100, arr[] = [1, 10, 5, 2, 7]  <b>Output:</b> 0  <b>Explanation:</b> No subarray exist</p> <p>Link: <a href="https://www.geeksforgeeks.org/problems/smallest-subarray-with-sum-greater-than-x5651/1">https://www.geeksforgeeks.org/problems/smallest-subarray-with-sum-greater-than-x5651/1</a></p>	In Class
	1	<p>Given an <b>array</b> and a range <b>a, b</b>. The task is to partition the array around the range such that the array is divided into three parts.</p> <ol style="list-style-type: none"> <li>All elements smaller than <b>a</b> come first.</li> <li>All elements in range <b>a</b> to <b>b</b> come next.</li> <li>All elements greater than <b>b</b> appear in the end.</li> </ol> <p>The individual elements of three sets can appear in any order. You are required to return the modified array.</p> <p><b>Note:</b> The generated output is true if you modify the given array successfully. Otherwise false.</p> <p><b>Geeky Challenge:</b> Solve this problem in O(n) time complexity.</p> <p><b>Examples:</b>  <b>Input:</b> arr[] = [1, 2, 3, 3, 4], a = 1, b = 2</p>	Take Home

		<p><b>Output:</b> true  <b>Explanation:</b> One possible arrangement is: {1, 2, 3, 3, 4}. If you return a valid arrangement, output will be true.  <b>Input:</b> arr[] = [1, 4, 3, 6, 2, 1], a = 1, b = 3  <b>Output:</b> true  <b>Explanation:</b> One possible arrangement is: {1, 3, 2, 1, 4, 6}. If you return a valid arrangement, output will be true.</p> <p>Link: <a href="https://www.geeksforgeeks.org/problems/three-way-partitioning/1">https://www.geeksforgeeks.org/problems/three-way-partitioning/1</a></p>	
	1	<p>Given an array <b>arr</b> and a number <b>k</b>. One can apply a swap operation on the array any number of times, i.e choose any two index <b>i</b> and <b>j</b> (<math>i &lt; j</math>) and swap arr[i] , arr[j] . Find the <b>minimum</b> number of swaps required to bring all the numbers less than or equal to <b>k</b> together, i.e. make them a contiguous subarray.</p> <p><b>Examples :</b>  <b>Input:</b> arr[] = [2, 1, 5, 6, 3], k = 3  <b>Output:</b> 1  <b>Explanation:</b> To bring elements 2, 1, 3 together, swap index 2 with 4 (0-based indexing), i.e. element arr[2] = 5 with arr[4] = 3 such that final array will be- arr[] = [2, 1, 3, 6, 5]  <b>Input:</b> arr[] = [2, 7, 9, 5, 8, 7, 4], k = 6  <b>Output:</b> 2  <b>Explanation:</b> To bring elements 2, 5, 4 together, swap index 0 with 2 (0-based indexing) and index 4 with 6 (0-based indexing) such that final array will be- arr[] = [9, 7, 2, 5, 4, 7, 8]  <b>Input:</b> arr[] = [2, 4, 5, 3, 6, 1, 8], k = 6  <b>Output:</b> 0</p> <p>Link: <a href="https://www.geeksforgeeks.org/problems/minimum-swaps-required-to-bring-all-elements-less-than-or-equal-to-k-together4847/1">https://www.geeksforgeeks.org/problems/minimum-swaps-required-to-bring-all-elements-less-than-or-equal-to-k-together4847/1</a></p>	Take Home
	1	<p>Given an array <b>arr[]</b> of positive integers. Return true if all the array elements are palindrome otherwise, return false.</p> <p><b>Examples:</b>  <b>Input:</b> arr[] = [111, 222, 333, 444, 555]  <b>Output:</b> true  <b>Explanation:</b>  arr[0] = 111, which is a palindrome number.  arr[1] = 222, which is a palindrome number.  arr[2] = 333, which is a palindrome number.  arr[3] = 444, which is a palindrome number.  arr[4] = 555, which is a palindrome number.  As all numbers are palindrome so This will return true.  <b>Input:</b> arr[] = [121, 131, 20]  <b>Output:</b> false  <b>Explanation:</b> 20 is not a palindrome hence the output is false.</p> <p>Link:</p>	Take Home
